

Electrophoresis Power Supply

Model: CCL-DY2C

Features:

- *We adopt the microcomputer processor as the control center of CCL-DY2C, ON/OFF switch.
- *CCL-DY2C has the following strong points: small, light, high output-power, stable functions;
- * The LCD can show you the following info. at the same time: voltage, electric current, pre-assigned time, etc.;
- * It has the warning function of timing;
- * It has the function of storing the operation parameters of last time;
- * It can work in the constant state of voltage, or in the constant state of electric current, and it can be converted automatically according to the pre-assigned parameters for different needs;
- * It has the protection function when it is under the circumstances of the unloaded, overload, suddenload change and when it is beyond the limitation
- * Parameters can be adjusted finely during the running
- * Output terminals: 2 pairs in parallel

Specifications:

- * Output voltage: 0 -600V, (Increase or decrease: 1V/step);
- * Output current: 0 -100mA, (Increase or decrease: 1mA/step);
- * Output power: 60W;
- * Size(L x W x H): 315 x 290 x 128 (mm);
- * Weight: about 5.0 kgs.

Application:

CCL-DY2C is most suitable for the low-current and low-power electrophoresis
